Microsoft Build 2025

Not Bad Security

Not Bad Security

AI Development topics that infra pro should understand

- AI Agents
- Model Context Protocol (MCP)

AI Agents

- Software program powered by AI
- Key components
  - Goal (“Check server status and ensure it is reachable”)
  - LLM (Core intelligence that interprets tasks and plans steps)
  - Tools (MonitorAPI to check, if server is online; HypervisorAPI to start/restart the server)
  - Memory (Optional, but helps interactions with task history and context)
- Extends AI capabilities outside of large language model with actions and sub-requests

Model Context Protocol

- A standardized format to describe **task goals**, **available tools**, and **data schemas** for AI models
- Key components
  - MCP Server
  - MCP Manifest (or description)
    - Metadata (Name, description, version etc.)
    - Input schema (Server name or ID)
    - Output schema (Short message that is server up and what actions were taken)
  - MCP Client
- Enables AI to **plan and execute tasks** using tools in a predictable and secure way

AI that could help daily routines

- Copilot Pages
- GitHub Copilot Agent mode
- Azure MCP Server
- Command line text-editor ”edit” (Insider on summer 2025)

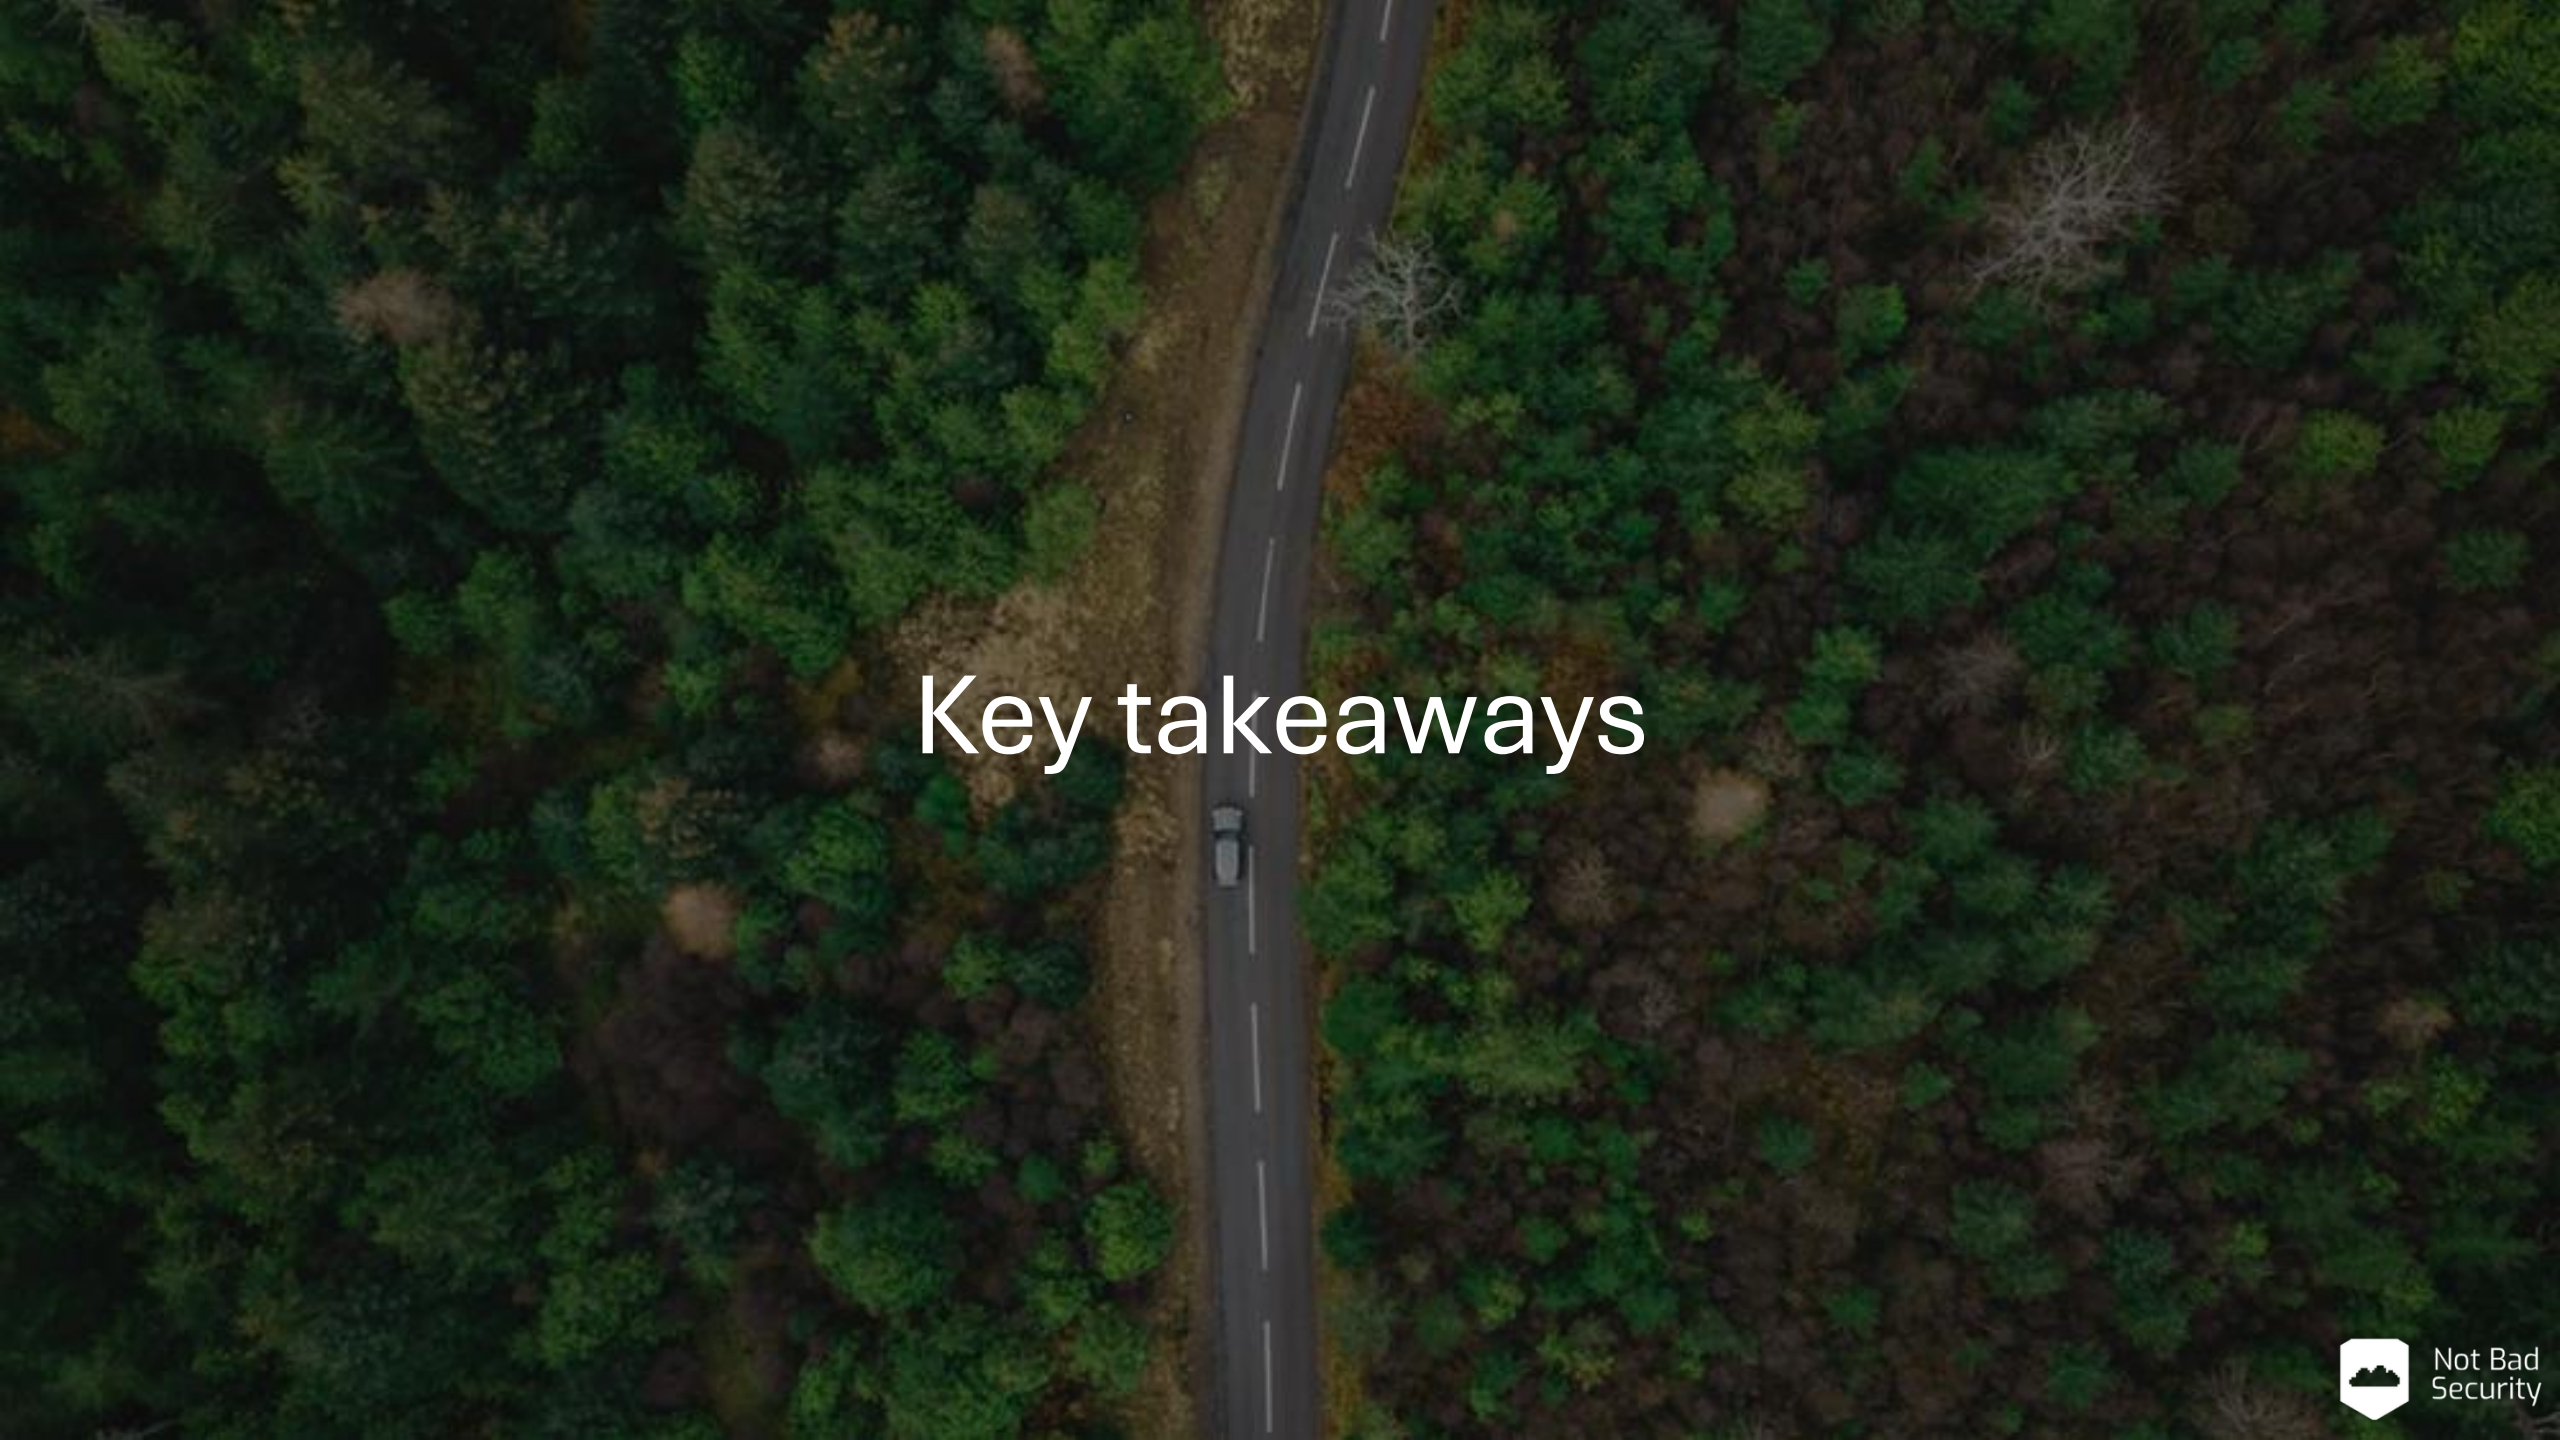

Infra updates

- Copilot Studio integrates to other models
- AI Foundry Agent Service
  - BYO Storage (Cosmos)
- Azure Foundry Local
- Foundry agent integrations to data in Azure Databricks
- SQL Server 2025 + SQL Server Management Studio 21
- MCP support for Windows itself

Security updates

- Entra Agent ID with Copilot Studio and AI Foundry
- Prompt Shield in GA
- Task adherence (agent gating)
- Defender for Cloud protection for AI Foundry

Key takeaways

Not Bad Security

Key takeaways

- Try to stay somehow up to date about where AI is today (Agents + MCPs)
- Require usage of Entra Agent IDs from your developers!
- While your developers are testing capabilities of AI, use your time wisely and learn the infra side same time
